JUNE 2012 TO SEPTEMBER
2014

<http://www.captiv8.com.au/relay>

Technologies & Tools Used

Zend Framework 2, MySQL, Git, SMS Gateway, YouTube API, Brightcove API and Amazon AWS.

Description

RELAY is a brand 'experiential' content distribution platform enabling personalised social amplification to all major social networks. RELAY stores and posts event content to one or all of the following social networks or platforms. Facebook, Twitter, Pinterest, Youtube, Vimeo, email and mobile.

Captiv8 Website - Ruby on Rails

JANUARY 2013 TO MARCH
2013

<http://www.captiv8.com.au/>

Technologies & Tools Used

Ruby on Rails, PostgreSQL, Rspec, Git, jQuery and Amazon AWS.

Description

The new official website for Captiv8 - Design, Digital & Broadcast Agency. I was responsible to create the CMS, deploying website to Amazon AWS and performance tuning.

Qtrack - CakePHP

MARCH, 2011 TO FEBRUARY,
2012

<http://qtrack.quantumcorp.com.au>

Technologies & Tools Used

CakePHP, MySQL, Git, jQuery, SMS Gateway and Amazon S3.

Description

Qtrack is an insurance investigation management system. The system provides communication platform between insurance investigator and job coordinator. The system enables coordinator to assign a job to investigator, send SMS notification, track progress of a job and generate reports.

Travel Management System - CakePHP

JULY, 2011 TO OCTOBER,
2012

<http://events.f2t.com.au>

Technologies & Tools Used

CakePHP, MySQL, Git and jQuery.

Description

Travel management system is used by travel agent to invite people to certain event and manage their itineraries. The system removes the need of excel file to track the guest's booking progress.

Bill Management System - CakePHP and AngularJS

SEPTEMBER, 2012 TO
JANUARY, 2013

<http://app.melwaniperdana.com>

Technologies & Tools Used

CakePHP, MySQL, AngularJS, CoffeeScript and Git.

Description

Bill Management System provides ability for users to add bills, products, and track their stocks. It also gives notification when a bill is due and allows the user to follow up a bill.

It is built using CakePHP as the REST Server and AngularJS for the UI.

Upipuma Downloader - ExpressJS

Undisclosed
